## Press Release – Rapid Prototyping

Thursday, 12<sup>th</sup> June 2003

We are pleased to announce our new service, Rapid Prototyping in 3D.

Rapid prototyping is a system of developing three dimensional stereolithographic designs for a number of applications and purposes. A virtual design is then taken from the computer, and then converted into a physical three dimensional model of the prototype.

The finished article will correspond identically to the original computer model: this is known as a WYSIWYG (What You See Is What You Get) process. Data is transferred from the CAD models that we create, and subsequently, the model can be layered up accordingly. The final model is created using a process called Stereolithography.

Whilst injection modelling is cheaper in some respects, rapid prototyping has the advantage of being able to create objects and elements in a single step process with high repeatability.

For all enquiries, please feel free to contact us on 02392 476283, or e-mail us: [starjammer@zoom.co.uk](mailto:starjammer@zoom.co.uk).

We look forward to working with you shortly and helping you shape and develop your projects to a successful conclusion.

Steven Parham  
Managing Director  
Starjammer Engineering Ltd
